LEBANON COUNTY CAREER AND TECHNOLOGY C·E·N·T·E·R

Section: PROGRAMS

Title: TECH PREP

Adopted: September 17, 1996

Revised:

	120. TECH PREP	
1. Purpose	The local school districts, the Lebanon County Career and Technology Center, postsecondary schools and local businesses are joining forces to restructure education. Their goal is to pool resources in a joint effort to prepare students for technical careers.	
2. Tech Prep Guidelines	Each student will follow a sequenced path of courses that leads to a specific technical career. Rigorous academic courses at the high school can be made relevant by teaching applications from the workplace. These academic courses are integrated with courses at the Career and Technology Center which bridges the gap between pure academic topics and their application in technical careers. This connection also enhances the students' career awareness and builds technical skills. The high school program is also integrated with community college programs to further expand the students' technical ability. Access to community college programs is enhanced by the students' strong academic foundation as well as receiving college credit for courses taken at the Career and Technology Center.
